

IMPORTANT ADVICE FOR LIVESTOCK PRODUCERS

LPA NVD REQUIREMENTS

Revised 9/3/2012 FOR RUSSIAN MARKET ACCESS

Detection of oxytetracycline or chlortetracycline residues in meat or offal in Russia will result in the meat processor, and potentially Australia, being banned from that market. Russia is Australia's fourth most important market.

To meet Russian market access requirements SAFEMEAT has implemented a 90 day Provisional Russian Export Slaughter Interval (ESI) for prescribed veterinary medicines and feed additives containing oxytetracycline or chlortetracycline – effective 1 January 2012. Specific products may have a shorter ESI – check the APVMA website <http://apvma.gov.au/node/10806>

Producers must declare the status of their livestock against this ESI by correctly completing the LPA NVD.

MARKETING LIVESTOCK AS 'RUSSIAN ELIGIBLE'

If you do not use prescribed veterinary medicines or feed additives containing oxytetracycline or chlortetracycline you must write the words 'Russian Eligible' on the LPA NVD. Use Question 9 for cattle, Question 8 for EU cattle and Question 7 for sheep.

If you use prescribed veterinary medicines or feed containing oxytetracycline or chlortetracycline and comply with the 90 day Provisional Russian Export Slaughter Interval you must write the words 'Russian Eligible' on the LPA NVD. Use Question 9 for cattle, Question 8 for EU cattle, and Question 7 for sheep.

Where 'Russian Eligible' is written on the LPA NVD it means that the livestock have not been injected with a prescribed veterinary medicine containing oxytetracycline or ingested feed containing chlortetracycline in the last 90 days.

OBSERVE 'BEST PRACTICE' DRUG ADMINISTRATION

If you use prescribed veterinary products containing oxytetracycline administer the treatment in the upper neck region only, as per label instructions. For feed additives containing chlortetracycline you must follow label directions accurately.

WHEN CAN'T LIVESTOCK BE MARKETED AS 'RUSSIAN ELIGIBLE'?

Do not write the words 'Russian Eligible' on the LPA NVD if livestock have been injected with a prescribed veterinary medicine containing oxytetracycline or fed with feed additives containing chlortetracycline in the last 90 days.

MORE INFORMATION?

Animal health treatments containing oxytetracycline or chlortetracycline are being assessed for lower slaughter intervals, and when available will be published on the APVMA website <http://apvma.gov.au/node/10806>

For the latest updates, including a list of prescribed veterinary products containing oxytetracycline or chlortetracycline, go to <http://apvma.gov.au/node/10806> or contact your veterinarian.

Export Slaughter Intervals (ESIs) of veterinary chemicals for use in cattle

An Export Slaughter Interval (ESI) is the minimum time that should elapse between administration of a veterinary chemical to animals and their slaughter for export. ESIs manage differences between Maximum Residue Limits (MRLs) allowed for chemicals in Australia and the MRLs of its trading partners. ESI advice is particularly important for quality assurance schemes, and especially for producers filling out the National Vendor Declaration (NVD) forms as part of the whole-of-chain management of exported product. ESIs have been agreed to by the cattle industry and the registrant of the veterinary chemical.

The Withholding Period (WHP) is the minimum period which must elapse between last administration or application of a veterinary chemical product, including treated feed, and the slaughter, collection, harvesting or use of the animal commodity for human consumption. WHPs are mandatory for domestic slaughter and are on the label of every registered product.

The APVMA has compiled the following list of ESIs for products used in cattle. Many of these ESIs were established previously by a third party, and the accuracy and validity of the values may be reviewed. As ESIs are subject to change due to alterations in overseas requirements, and ongoing review and consultation with industry, this website is provided to ensure the latest information is available to producers and users.

ESIs FOR PRODUCTS CONTAINING OXYTETRACYCLINE AND CHLORTETRACYCLINE FOR EXPORT TO RUSSIA

The government/industry body SAFEMEAT has applied a Provisional Russian Export Slaughter Interval (ESI) to veterinary medicines and feed additives that contain oxytetracycline and/or chlortetracycline.

The Provisional Russian ESIs are specified on the SAFEMEAT notice that can be found at

<http://www.safemeat.com.au>

To meet Safemeat's requirements for slaughter of cattle for the Russian meat market, and before a claim of 'Russian eligible' can be written on the Livestock Production Assurance (LPA) National Vendor Declaration (NVD), producers must observe the terms of the notice and the Provisional ESIs specified.

The APVMA regularly updates this list to include new or revised ESIs. This list was last updated on 9 September 2015.

These products have been added to this list since 3 November 2014 (last update):

COOPERS TRIFECTA TRIPLE ACTIVE DRENCH FOR SHEEP AND CATTLE MINERALISED
ELANCO KEXXTONE CAPSULE
ILIUM BUCCALGESIC OTM
METAJECT 4 IN 1 METABOLIC TREATMENT FOR CATTLE AND SHEEP
MOXIMAX POUR-ON FOR CATTLE AND RED DEER
NITROFLUKE INJECTION FLUKICIDE FOR CATTLE
NORFENICOL 300 mg/mL SOLUTION FOR INJECTION FOR CATTLE AND PIGS
NOVORMON ECG
SELENIUM ORAL CONCENTRATE
TOPDEC POUR-ON FOR CATTLE AND RED DEER

CATTLE PRODUCT ESIs: Last updated 9 September 2015

Notes:

T ESI is under review and final ESI may be longer.

* Removal of ear tag prior to slaughter is recommended to prevent possible contamination.

^s Calves which have suckled on treated cows must not be slaughtered less than 4 months after the last treatment of these cows.

Export Slaughter Intervals (ESIs) of veterinary chemicals for use in sheep

An Export Slaughter Interval (ESI) is the time which should elapse between administration of a veterinary chemical to animals and their slaughter for export. ESIs manage differences between Maximum Residue Limits allowed for chemicals in Australia and its trading partners. ESI advice is particularly important for quality assurance schemes, and especially for producers filling out the National Vendor Declaration (NVD) forms as part of the whole-of-chain management of exported product. ESIs have been agreed to by the sheepmeat industry and the registrant of the veterinary chemical.

The withholding period (WHP) is the minimum period which must elapse between last administration or application of a veterinary chemical product, including treated feed, and the slaughter, collection, harvesting or use of the animal commodity for human consumption. WHPs are mandatory for domestic slaughter and are on the label of every registered product.

The APVMA has compiled the following list of ESIs for products used in sheep. Many of these ESIs were established previously by a third party and the accuracy and validity of the values may be reviewed. As ESIs are subject to change due to alterations in overseas requirements, and ongoing review and consultation with industry, this website is provided to ensure the latest information is available to producers and users.

ESIs FOR PRODUCTS CONTAINING OXYTETRACYCLINE AND CHLORTETRACYCLINE FOR EXPORT TO RUSSIA

The government/industry body SAFEMEAT has applied a Provisional Russian Export Slaughter Interval (ESI) to veterinary medicines and feed additives that contain oxytetracycline and/or chlortetracycline. The Provisional Russian ESIs are specified on the SAFEMEAT notice that can be found at <http://www.safemeat.com.au>

To meet Safemeat's requirements for slaughter of sheep for the Russian meat market, and before a claim of 'Russian eligible' can be written on the Livestock Production Assurance (LPA) National Vendor Declaration (NVD), producers must observe the terms of the notice and the Provisional ESIs specified.

The APVMA regularly updates this list to include new or revised ESIs. This list was last updated on 9 September 2015.

These products have been added to this list since 3 November 2014 (last update):

IT IS THE LAW TO TAG ALL LIVESTOCK AND FILL IN YOUR LPA NVD CORRECTLY AND COMPLETELY

DID YOU KNOW A PRODUCER WAS FINED \$6,000 OVER A FAILED NVD?

A sheep producer was fined \$6,000 in the Bendigo Magistrates Court in December 2013 after pleading guilty to offences under the Livestock Disease Control Act. The offences related to breaches of the NLIS Sheep & Goats.

The accused failed to provide a correctly completed NVD before or at the time of arrival at a saleyard of the consignment of non-vendor bred sheep, which is a requirement of a Mob Based Movement Order.

The accused had also failed to record on the NVD the Property Identification Codes (PIC) printed on all ear tags attached by the previous owners in the consignment or alternatively, he did not attach pink post-breeder tags stamped with the PIC of dispatch matching the pre-printed PIC on the NVD.

All livestock must be NLIS identified properly prior to any movement off your property. You must fill in the LPA NVD correctly and completely, answering all questions fully.

Russian Eligible: is written on the LPA NVD when the livestock have never had or have not been injected with or ingested feed products containing oxytetracycline and chlortetracycline in the last 90 days.

Saudi Eligible: is written for stock that have not been fed products containing animal fats in their lives.

If in doubt ask your agent.

CATTLE NVDs

Q1 Cattle LPA NVD: *Have any of the cattle in this consignment ever in their lives been treated with a HGP?*

If some cattle are treated with HGPs it is **YES** and some are not treated with HGPs the answer is **NO**.

In this case, complete one NVD for HGP treated livestock and one NVD for the non HGP treated livestock.

Separate NVDs must be used.

Q3 Cattle LPA NVD: *Has the owner stated above owned these cattle since their birth?*

If some cattle are vendor bred it is **YES** and some are purchased the answer is **NO**. In this case you should put your vendor bred livestock on one NVD, the purchased livestock on another NVD. Separate NVDs must be used.

SHEEP NVDs

Q3 Sheep LPA NVD: *Has the owner stated above owned these sheep or lambs since their birth?*

If some sheep are vendor bred it is **YES**, if some are purchased the answer is **NO**. In this case you should put your vendor bred livestock on one NVD, the purchased livestock on another NVD. Separate NVDs must be used.

If the sheep/lambs in your consignment are **not vendor bred YOU MUST** list all the PIC numbers on the NVD that are on the tags in the consignment, **OR** attach a pink post breeder tag matching the pre-printed PIC on the NVD. If you use pink post breeder tags, you do not need to list the other PIC numbers on the NVD, simply write "pink tags" in Question 7.

The LPA National Vendor Declaration (LPA NVD) is the main document behind Australia's meat and livestock food safety reputation. As a livestock producer, you must guarantee the animals you sell are not exposed to food safety hazards and that you meet all traceability requirements, should a food safety issue occur.

LPA is industry's on-farm food safety program. LPA meets the stringent requirements of domestic and export markets, providing assurance of the safety of your Australian beef, lamb, sheep and goat meat.

When an LPA NVD is signed, as a producer you are sharing information on your livestock's history and declaring compliance with all LPA requirements including traceability. Buyers demand this, as do their overseas customers.

State departments will be doing audits of abattoirs, export depots, feedlots and saleyards, checking NVDs and traceability. Costs to rectify the NVDs, fines and/or prosecutions could follow for incorrect NVD paperwork and non-tagging of livestock.

Australian Livestock & Property Agents Association Members encourage producers to check all stock are properly tagged and to fill in the NVD correctly and completely. By doing this you will ensure you obtain maximum competition for your livestock and avoid possible departmental prosecution and penalties. Please remember to only ever send animals that are "Fit To Load" and "Fit For The Journey".
